

TOTALLY WICKED'S

TITANIUM ICE

**THE WORLD'S PREMIER
e-MIXING LIQUID**

WARNING: Totally Wicked's Titanium Ice 72mg provides you with a nicotine base that will allow you to produce your own flavoured juices at home.

It is not intended for vaping at the full 72mg strength!

Successful mixing at home relies upon understanding and application of some basic principles.

Firstly, the strength description: "72mg", indicates a nicotine concentration of 72mg (milligrams) per ml (millilitre) and not per bottle. This equates to a strength of approximately 7.2% w/v (weight/volume) (i.e. dependent on specific gravity there are approximately 1000mg in 1ml.) It is important to understand this, and that it is the relative proportion of Titanium Ice in your mixed juice, and not the absolute quantity, that will determine final strength. For example; If you dilute Titanium Ice with a nicotine free diluent, such as Propylene Glycol, to a 50:50 ratio by volume then the resulting liquid will contain 36mg/ml.

Secondly, you should never mix in large batches unless you know for certain that you are going to like the result – Once a diluent is added to a batch of Titanium Ice, you cannot increase the strength unless you add more Titanium Ice which of course will increase further the volume of the liquid you are preparing. We suggest that you mix only small quantities of fluid whilst you optimise the strength and flavours that will eventually become your preferred range. Using this approach if you do at first incorrectly calculate your ratios, you can re-strengthen with a few more drops of Titanium Ice, or add further diluent or flavour concentrate to let down the strength or perk up the flavour intensity. You will also be able to try out more flavours with a single bottle if you make small batches.

Sundry mixing accessories that will assist you in preparing and storing your e-liquid are available from the Totally Wicked website.

CONTACT:

GERMANY: Tel 01803 942533 www.totallywicked-eliquld.de

Unless you like your flavours and nicotine very strong, and we never advise vaping any nicotine solution greater than 36mg/ml, you will want to add some inert (nicotine free) liquids to dilute your mixtures (these liquids are called “diluent”).

You may use Propylene Glycol (PG), Vegetable Glycerine (VG), or Aqueous Glycerine (AG). Totally Wicked’s Titanium Ice is formulated using either PG or VG, both of which are UK sourced and comply with all necessary food hygiene and pharmaceutical standards.

The following chart shows the approximate final strength you will achieve by mixing different proportions of Titanium Ice, flavourings and diluents, for a total of 22 drops (approx. 1ml of e-liquid).

Drops of Titanium Ice	Drops of flavouring	Drops of diluent	Final Strength (approx.)
11	6	5	36mg
7	6	9	24mg
6	6	10	18mg
3	6	13	11mg
2	6	14	8mg

You can scale up a recipe you like quite easily. For example, to make 10ml of e-liquid, simply multiply the above drops by 10.

If you find the flavour too weak simply substitute extra drops of flavouring for some of the drops of diluents. So long as there are 22 drops in total, and the same number of drops of Titanium Ice, the result will be the desired final strength.

So that is about all you need to know to get started, if you have any questions, or are looking for tasty flavours to try, check out the Totally Wicked forum – it is full of helpful, friendly folk who can help you get the most out of your mixing.

Good Luck, and enjoy!
